

ANIK PAUL

Software Engineer (Frontend Focused)

Dhaka, Bangladesh • hello@paulanik.com • paulanik.com • github.com/anikpaul99 • linkedin.com/in/anik-paul-dev

Frontend developer (Next.js/React) currently growing into backend development (NestJS, PostgreSQL) and deployment tooling (Docker). Leads a 30+ person cross-functional engineering team, owning client-facing scoping, technical delivery, and project management for full-stack client platforms. Drove \$500K+ in contracted delivery revenue since joining.

EXPERIENCE

Software Engineer & Capsule Lead | Softvence, Betopia Group

2025 – Present

- Lead “Runtime Terror,” a 30+ person cross-functional capsule spanning UI/UX, Flutter, Frontend, and Backend (Node/NestJS, Laravel), delivering client web, mobile, and backend products end-to-end.
- Own the full delivery pipeline for inbound client engagements: technical feasibility analysis, scoping, phased pricing, team allocation, and KPI-driven delivery tracking.
- Drove \$500K+ in contracted revenue since joining through client acquisition support, retention, and delivery across multiple concurrent engagements.
- Build production frontend features in Next.js, React, TypeScript, Redux Toolkit, and RTK Query; currently expanding into backend development with NestJS, Prisma, and PostgreSQL.
- Scoped and delivered AI-integrated product features for client platforms, working directly with AI-assisted workflows in both delivery and internal tooling.
- Resolved high-stakes client escalations and delivery disputes, and led a security-incident response that migrated the team’s source control to a self-hosted platform.

SELECTED PROJECTS

Backlyst — Multi-surface marketplace platform (web, admin, mobile, backend) [Live](#) [Admin](#) [Code](#)

- Multi-surface marketplace product — Next.js web app, React/Vite admin dashboard, Flutter mobile app, and a NestJS/Prisma/PostgreSQL backend — built by the team he leads.
- Owned the Next.js web app and React/Vite admin dashboard frontend, and led delivery of the full feature set: auth, task-marketplace workflows, real-time messaging, notifications, Stripe billing, and cloud uploads.
- Assumed ownership mid-project after the original developer departed, taking on AWS infrastructure and DNS coordination without disrupting delivery.

BT Scaffolds Quote System — Live client business tool for instant scaffold quoting [Live](#) [Code](#)

- Built an interactive Mapbox/Leaflet drawing tool that measures a building perimeter and calculates a live, GST-inclusive price estimate.
- Shipped a React 19/Vite frontend integrated with a lightweight Express/Nodemailer backend that emails structured, priced quote requests (with map snapshot) directly to the business.

NextGen Pros — Sports platform with real-time data and e-signature workflows [Live](#) [Code](#)

- Built with Next.js 16, React 19, Redux Toolkit Query, and Firebase/Firestore for real-time data; added e-signature capture and Excel-based reporting (xlsx, Recharts).
- Currently owns the platform’s stabilization phase, resolving production bugs post-launch.

TECHNICAL SKILLS

Production Stack: Next.js, React, TypeScript, Redux Toolkit, RTK Query, React Query, Tailwind CSS, Radix UI / shadcn, Framer Motion, Git/GitHub

Currently Exploring: Node.js, NestJS, Prisma, PostgreSQL, Redis, Docker

EDUCATION

Bachelor of Computer Science — IUBAT (International University of Business Agriculture and Technology) | 2018 – 2022
